Personal Information

- Military Service: Deferred
- Driver's License: B

Professional Experience

October 2023 Wiro AI

- Generative artificial intelligence tools optimized for GPU usage and tailored for end-users are actively developed by my team and me.
- I work extensively with technologies such as Stable Diffusion 1.5, Stable Diffusion XL, Stable Diffusion 3.5, FLUX, AI Agents, RAG, LLMs, fine-tuning, LoRA, and Dreambooth.
- I trained 28 models under the name "Wiro AI" using FLUX-LoRA and FLUX-Dreambooth techniques, published on platforms like CivitAI and Hugging Face. These trainings were conducted using tools such as Kohya-ss Dreambooth, Kohya-ss LoRA, and the ostris/ai-toolkit.
- Using Kohya-ss Dreambooth, I trained domain-specific SDXL Dreambooth models.
- In addition to Wiro AI, I independently fine-tuned and published 4 LLM models on Hugging Face.
- For portrait training, I worked with more than 10,000 images. For specific style transfer tasks, I used 10 targeted images to achieve successful SDXL Dreambooth results.
- I have conducted over 200 LoRA trainings and more than 100 Dreambooth trainings.
- I also developed a custom scheduler algorithm for Flux-LoRA training and integrated it into Kohya-ss.
- Numerous generative AI tools — including image-to-image, image-to-video, text-to-video, and text-to-image — were adapted into the Wiro AI ecosystem and made accessible to end-users.
- Together with the team, I co-developed a generative AI tool that combines Stable Diffusion and LLMs.
- I am currently developing both collaborative and standalone AI Agents and actively launching new projects in this domain.

About Me

In 2023, I graduated with a degree in Software Engineering from Firat University.

My passion for Data Science and Artificial Intelligence has been realized through hands-on projects in the fields of Machine Learning and Deep Learning — including work with regression, decision trees, KNN, and GANs.

Currently, my primary focus is on Generative AI. I actively work with Large Language Models (LLMs), AI agents, and generative models such as Stable Diffusion, particularly in projects involving image-to-video and text-to-image generation.

I am an analytical and team-oriented developer who enjoys understanding and solving complex systems. My goal is not only to keep pace with technological advancements, but also to help shape them and deliver meaningful value.

Education

2018-2022	Software Engineering
	Firat University
	GPA: 3.05 / 4.00

Languages

English : B2
Turkish : C2 (Native)

Logo Software

February – June 2023

- Worked as a Backend Developer on Logo B2B automation using .NET technologies.
- Technologies used: Angular, C#, MS SQL, Jira, Git, Agile, Scrum.

Dijital Sahne

June – September 2022

- Completed an internship in mobile application development.
- Technologies used: Dart, Flutter, NoSQL, Firebase.

Skills

- Python
- Huggingface
- Pytorch
- Cloud
- Ubuntu
- Civit AI
- Tensorflow
- AWS
- Linux
- Automatic1111
- Transformers
- Runpod
- Git
- ComfyUI
- Diffusers
- Colab
- Jira
- LoRA
- Langchain
- Kaggle
- Agile
- Dreambooth
- Wandb
- Kanban
- Fine-Tune
- MLFlow
